CLAIMS

- 1 1. A broadcast transmission medium coupling a head end to
- a plurality of clients, the medium including an alert
- 3 management message therein and comprising:
- a first data field comprising an identification of a
- 5 target set of clients;
- a second data field comprising an alert type message;
- 7 and
- a third data field comprising a status message.
- 1 2. The medium of claim 1 further comprising a fourth data
- 2 field comprising a message identification.
- 1 3. The medium of claim 1 wherein the target set of
- 2 clients consists of a single client.
- 1 4. The medium of claim 1, the second data field comprises
- 2 a Boolean flag.
- 1 5. A data signal embodied in a carrier wave comprising:
- a first data field comprising an identification of a
- 3 target set of clients;

Attorney's Docket No. 10559/355001/P10032

- a second data field comprising an alert type message;
- 5 and
- a third data field comprising a status message,
- wherein the carrier wave provides one-way
- 8 communication.
- 1 6. The data signal of claim 5 further comprising a fourth
- 2 data field comprising a message identification.
- 1 7. The data signal of claim 5 wherein the target set of
- 2 clients consists of a single client.
- 1 8. The data signal of claim 8, The medium of claim 1, the
- second data field comprises a Boolean flag.
- 1 9. A method of sending an alert management message to a
- 2 plurality of recipients on a broadcast channel comprising:
- generating a first data field that identifies at least
- 4 one target recipient from among the plurality of
- 5 recipients;
- 6 generating a second data field that identifies the
- 7 type of alert management message; and
- transmitting the data fields to the recipients.

- 1 10. The method of claim 9 further comprising generating a
- third data field that uniquely identifies the alert
- 3 management message.
- 1 11. The method of claim 9, the alert management message
- including a payload message, the method further comprising:
- generating the payload message, the payload message
- 4 comprised of at least one byte;
- transmitting the number of bytes in the payload
- message; and
- 7 transmitting the payload message.
- 1 12. An article comprising a computer-readable medium that
- 2 stores computer-executable instructions for sending an
- 3 alert management message to a plurality of recipients, the
- 4 instructions causing a machine to:
- generate a first data field that identifies at least
- 6 one target recipient from among the plurality of
- 7 recipients;
- generate a second data field that identifies the type
- 9 of alert management message; and
- transmit the data fields to the recipients.

- 1 13. The article of claim 12, the instructions further
- 2 causing the machine to generate a third data field that
- 3 uniquely identifies the alert management message.
- 1 14. The article of claim 12, the alert management message
- 2 including a payload message, instructions further causing
- 3 the machine to:
- generate the payload message, the payload message
- 5 comprised of at least one byte;
- transmit the number of bytes in the payload message;
- 7 and
- 8 transmit the payload message.
- 1 15. A method of receiving an alert management message
- transmitted to a plurality of recipients on a broadcast
- 3 channel comprising:
- testing a first data field, the first data field
- 5 identifying at least one target recipient;
- ignoring the alert management message when the
- 7 recipient is not a target recipient; and
- recovering the alert management message when the
- 9 recipient is a target recipient.
- 1 16. The method of claim 15 further comprising:

- testing a second data field, the second data field
- 3 identifying an action by the recipient; and
- 4 performing the action.
- 1 17. The method of claim 15 further comprising:
- testing a second data field, the second data field
- 3 identifying an alert management state for the recipient;
- 4 and
- assuming the alert management state.
- 1 18. An article comprising a computer-readable medium that
- stores computer-executable instructions for receiving a
- alert management message transmitted to a plurality of
- 4 recipients on a broadcast channel, the instructions causing
- 5 a machine to:
- test a first data field, the first data field
- 7 identifying at least one target recipient;
- ignore the alert management message when the recipient
- 9 is not a target recipient; and
- recover the alert management message when the
- 11 recipient is a target recipient.
 - 1 19. The article of claim 18, the instructions further
- 2 causing the machine to:

- test a second data field, the second data field
- 4 identifying an action by the recipient; and
- 5 perform the action.
- 1 20. The article of claim 18, the instructions further
- 2 causing the machine to:
- test a second data field, the second data field
- 4 identifying an alert management state for the recipient;
- 5 and
- 6 assume the alert management state.
